

Harold Harrington

Director of Field Operations, Wireless Services Inc.

Harold Harrington has been in the wireless infrastructure business for almost 30 years and he has consistently risen to the top of the organizations of which he has been a part. In 1983, Youngstown Cellular (Wilcom) hired him into their RF Engineering group and then moved him into a Construction Manager position where he was responsible for all site construction in Ohio and Pennsylvania. In 1992, he went to work for Crown Communications as a Construction Manager where he developed tower sites for Crown, ATT and Bell Atlantic. He was then promoted to National Manager of Tower Services, making him responsible for all tower builds on national basis. From there, he was promoted yet again by Crown and given the opportunity to establish the purchasing department for Crown Castle International as their Director of Procurement. Then, in 2003, Harold moved on to Alpha Telecom, where he took on the role of General Manager. As such, he oversaw the civil, erection and installation groups as well as developing a new department to focus on the growing need for tower reinforcement work. This addition allowed Alpha to complete hundreds of reinforcement jobs over the course of three years.

We have been in this business for a while and we know (as our customers do) that experience matters. With that being said, we are thrilled that Harold has decided to bring his experience into our organization. Weather you need help with raw land development, co-locations, tower reinforcements, technology upgrades or just standard maintenance, Harold can provide you with the kind of expert attention and service that will put your project on a track to success.
